MRS™
BEARINGS

WHERE
EXPERTISE
MEETS **ENDURANCE**

“Our work is our legacy.”

- Mr. Mayank Doshi
Founder Managing Director

It is this profound philosophy that is etched in the DNA of MRS Bearings Pvt. Ltd., where tradition and innovation blends to produce precision-engineered bearings renowned for their reliability and longevity. With 63 years of bearing expertise and 33 years of manufacturing excellence, the enterprise has grown from a modest 5,000 sq. ft. facility in Surendranagar, Gujarat, to the state-of-the-art manufacturing powerhouse spread across 1,80,000 sq. ft., annually producing 10 million bearings.

Legacy
63 Years of Bearing Expertise

Workforce
200+ Skilled Employees

Industries Served
Automotive (2W, 3W, Passenger & Commercial Vehicles), Farm Equipment, Industrial Applications, Textile Machinery

Global Reach
Exporting to 33 Countries across 5 Continents

Product Portfolio
12 Bearing Categories with 2,500+ Configurations

Manufacturing Space
1,80,000 sq. ft.

Installed Capacity
10 Million Bearings Annually Core Processes Precision Machining Area, Grinding Shop, Honing & Super finishing Area, Press Shop, Controlled Assembly Area

R&D Focus
In-house R&D Team for Customized Bearing Solutions

Quality Certifications
ISO 9001 | IATF 16949

MRS™ BEARINGS

MRS Bearings’ corporate philosophy is embedded in the belief that true customer satisfaction is achieved through the unwavering delivery of uncompromising quality and ethical operations. In the rapidly evolving manufacturing landscape, we are not just adapting but leading the way.

Our philosophy is well enshrined through four values...

Trust & Integrity

We believe trust is the cornerstone of every relationship. By acting with honesty, fairness, respect, and responsibility, we foster long-term partnerships with our customers, employees, and stakeholders.

Excellence

As an engineering-driven company, excellence is our driving force. We are committed to producing reliable bearings by continually refining our manufacturing processes and adopting innovative technologies that meet the highest industry standards.

Customer Centricity

Our customers are at the heart of everything we do. By actively listening and understanding their needs, we exceed their expectations with solutions that deliver value, performance, and reliability throughout every stage of the customer journey.

Continuous Improvement

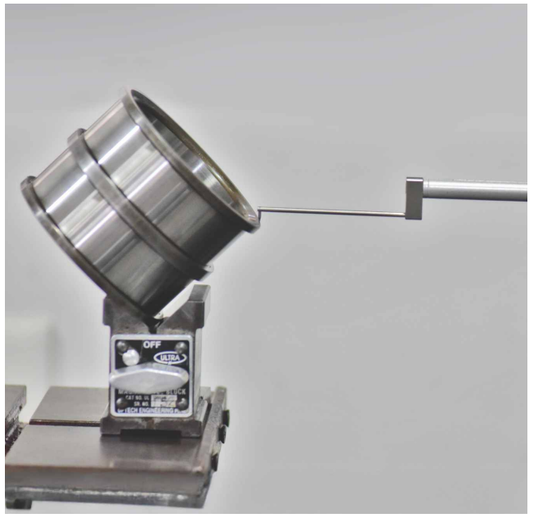
We are dedicated and ceaseless in our pursuit of improvement. Whether through technological advancements, skill development, or process optimization, we embrace a culture of continuous growth to stay ahead of the curve.

SUSTAINABLE OPERATIONAL EXCELLENCE

In today's fast-evolving manufacturing landscape, MRS Bearings is at the forefront of embracing Industry 4.0, where digitalization and smart technologies are transforming production processes.

Our success is driven by a relentless focus on optimizing operations while minimizing environmental impact. By actively monitoring our carbon footprint, focusing on precision engineering, and adopting modern manufacturing techniques, we streamline workflows, reduce waste, and enhance efficiency at every step.

We believe in building long-term partnerships based on trust by delivering innovative products that reduce friction, optimize performance, and drive mutual growth—ensuring success for our customers and partners.



UNCOMPROMISING COMMITMENT TO QUALITY

With zero-defect manufacturing as our benchmark, we continuously refine our quality systems to exceed industry standards. Every bearing we produce undergoes rigorous quality check points to ensure performance as designed for the demand applications.

Our commitment to precision-engineered solutions is backed by state-of-the-art manufacturing processes, an in-house quality control room with latest equipments, and metallurgical laboratory that ensure accurate quality controls at every stage of the process value chain.

At MRS Bearings, continuous improvement isn't just a goal—it's a way of life. We strive to deliver quality that consistently exceeds customer expectations.

EXCEPTIONAL DELIVERY PERFORMANCE

At MRS Bearings, customer satisfaction means more than timely delivery—it's about providing peace of mind by being a trusted supplier partner in their success journey.

Our agile manufacturing setup, powered by SAP B1 ERP and a proactive supply chain team, ensures the achievement of a single-minded goal of on-time, in-full deliveries.

Through proactive communication and flexible supply chain solutions, we uphold our promise of "Reliability in Motion", ensuring that we consistently exceed customer expectations and become a partner of choice worldwide.

PRODUCTS PAR EXCELLENCE

NEEDLE ROLLER BEARINGS

- MRS produces standard as well as custom designed solid race needle roller bearings.
- With improved design geometries and enhanced grinding processes, MRS needle roller bearings provide Value, especially with respect to its service life & smoother running characteristics over a wide range of applications.

CYLINDRICAL ROLLER BEARINGS

- MRS follows the industry-wide global designated prefix for cylindrical roller bearings such as N, NU, NJ & NUP for easy interchangeability, along with a customised offering on cages made out of polyamide or steel.
- For low speed-high load rating requirements, MRS offers full complement cylindrical roller bearings used with floating, fixed or step design options to meet the demanding applications prone to relatively higher fatigue stresses.

SPHERICAL ROLLER BEARINGS

- MRS spherical roller bearings are capable of running at high loads, accommodated by its unique internal geometries and the ability to sustain axial forces in both directions.
- The spherical roller bearings offer excellent self-aligning capability and are impervious to shaft deflections and are misaligned to the bearing seats.
- MRS Spherical Roller Bearings offer superior performance under heavy loads and challenging conditions.

DRAWN CUP ROLLER BEARINGS

- MRS Drawn Cup Roller Bearings are specifically designed for compact spaces and medium-load applications.
- The lightweight bearings provide efficient performance while maintaining the same reliability associated with ground needle roller bearings ideal for space-constrained setups.

DEEP GROOVE BALL BEARINGS

- MRS Deep Groove Ball Bearings are designed for high-speed operation with optimized performance, minimal vibration and low noise.
- The deep raceway grooves on the inner and outer rings provide excellent axial and radial load-carrying capacity, with super-finished raceways and high-grade steel balls.
- Built for precision and durability, MRS Deep Groove Ball Bearings deliver smooth and long-lasting performance, even in the most challenging applications.

ANGULAR CONTACT BEARINGS

- With offset inner and outer ring raceways, Angular Contact Bearings handle significant axial and radial loads simultaneously; the bearings are designed for high-speed, low starting torque applications.
- Available in both open and sealed designs, the bearings offer low rolling resistance, making them ideal for machine tools and other applications requiring rigid axial guidance and high performance. Double-row variants support axial loads in both directions, providing robust and reliable performance in demanding environments.

RADIAL CAGE ASSEMBLIES

- MRS Radial Cage Assemblies are available in a variety of materials, including steel, reinforced glass fiber plastic, and brass, these pre-assembled Radial Cage units are ready for immediate installation.
- MRS Bearings deliver robust and dependable performance in applications where both space and strength are essential, such as gearboxes and pumps. The bearings are effective in scenarios where the shaft and housing bore can serve as raceways, allowing for compact bearing configurations with minimal radial space requirements.

AXIAL THRUST CAGE ASSEMBLIES

- MRS Axial Thrust Cage Assemblies are engineered to handle axial loads; consisting of a shaft washer, housing washer, rolling elements, and a cage assembly, these bearings feature raceways on the washer faces and are fully separable.
- Ideal for high-precision applications such as clutches and spindles, MRS Axial Thrust Cage Assemblies ensure long life and consistent performance, making them essential in demanding machinery.

ROLLER PINS & ACCESSORIES

- MRS Roller Pins and Accessories provide a variety of modifications on needle rollers, including the standard BP, BPM, and BR series, all while adhering to strict geometrical tolerances.
- MRS Roller Pins are precisely graded within 2-micron groupings, ensuring optimal performance and meeting the designed clearances of your assemblies for maximum efficiency.

CUSTOM-ENGINEERED BEARINGS

Off the shelf Bearings don't always suit. That's why we produce more than just the standard. MRS Bearings are designed to serve specific purposes while ensuring maximum efficiency and extended operational life. These custom-engineered bearings may be required to withstand heavy loads, harsh conditions, and high-speed rotations and expected to deliver optimal performance where standard bearings fall short. Manufactured to last, they provide reliability, durability, and
